

100Mbps switch cannot connect to 1Gigabit switch

Overview

Make sure the computer you're connecting actually supports 1 Gbps Ethernet. Try to swap cables with another switch port. Understanding these is the first step toward resolving the issue: Gigabit Ethernet requires all 8 wires inside the cable to be intact and properly connected, whereas 100 Mbps only uses 4 wires. If the port is at fault, you'll get only 100 Mbps on it no matter what the cable length is and what's connected on the other end. The easiest way to do this in Windows is to right-click your network icon in your system tray and click either Network and Internet Settings, then click Network and Sharing Center, then click change adapter. Hey guys, I bought a Gigabit LS105G TP-Link switch for my home network, but after connecting my PC to it, my ISP Router says it's 100Mbit/s, even though the switch, and both cables used (ISP Router to Switch / Switch to PC) are 1000Mbit/s.
