

18-meter communication tower

Overview

Radio masts and towers are typically tall structures designed to support antennas for telecommunications and broadcasting, including television. There are two main types: guyed and self-supporting structures. They are among the tallest human-made structures. Masts are often named after the broadcasting organizations that originally built them or currently use them. A mast radiator o. TerminologyThe terms "mast" and "tower" are often used interchangeably. However, in structural engineering terms, a tower is a self-supporting or structure, while a is held up by stays or. A mast is. The first experiments in were conducted by beginning in 1894. In 1895–1896 he invented the, which was initially a wi.
