

200kV distribution box model

Article Overview

Eaton's 200 kV BIL deadbreak system provides a complete high-voltage distribution solution for underground and collector systems.

Overview

A 200 kV distribution box is a high-voltage electrical enclosure designed to safely distribute power from transformers or collector systems to multiple circuits while providing protection against overvoltage and transient events. Eaton offers a 200 kV BIL deadbreak connector system, which includes tee bodies, insulating plugs, junctions, and caps, enabling full system protection without sacrificing reliability due to component limitations .

Key Features

- BIL Rating: 200 kV Basic Impulse Level (BIL), ensuring high resistance to transient overvoltages .
- Deadbreak Design: Reduces the risk of electrical faults and allows safe connection/disconnection under load.
- Compatibility: Works with Eaton's Cooper PowerE series 200 kV transformers, ensuring the system components are fully rated for high-voltage operation .
- Applications: Ideal for medium-voltage collector systems (MVCS) in large underground circuits, including wind and solar farms, where 35 kV products are used to carry generation loads to substations .
- Reliability: Matching BIL ratings between connectors and transformers increases system longevity and reduces damage from high-voltage transients
