

24-core MPO branch optical cable

Article Overview

A 24-core MPO optical cable branch consolidates 24 fibers into a single connector, enabling high-density, low-loss, and efficient fiber optic distribution for modern data centers and high-speed networks.

Overview

The 24-core MPO (Multi-Fiber Push-On) cable is designed to house 24 individual fibers in a single ferrule, effectively doubling the capacity of a standard 12-fiber MPO connector while maintaining the same physical footprint (). This high-density design reduces cable bulk, tray congestion, and simplifies backbone distribution in data centers or telecom networks.

Structure and Design

- **Dual-row fiber arrangement:** The 24 fibers are organized in two rows of 12 fibers each within a standard MT ferrule, with fibers 1-12 on the top row and 13-24 on the bottom row ().
- **High-density branch:** The cable can be terminated into a conversion cassette, splitting the 24 fibers into three separate 8-fiber MPO outputs, compatible with Base-8 transceivers for 400G or 800G networks ().
- **Connector types:** Male MPO connectors have guide pins, while female connectors have pinholes; proper mating ensures low insertion loss and high reliability ().
