

45-degree cable tray climbing bend

Article Overview

A 45-degree cable tray bend is typically achieved by making two 22.5-degree miter cuts on separate tray sections and joining them to form the desired angle.

Step-by-Step Technique

1. Measure and Mark:

- Draw a perpendicular line across the width of the cable tray.
 - Using a protractor or angle finder, mark a 22.5-degree angle from this perpendicular line on each tray section. The second tray piece should have the cut in the opposite direction to allow proper joining .
- #### 2. Cutting the Tray:
- Use an appropriate cutting tool, such as an angle grinder with a metal cutting disc for metal trays or a suitable saw for fiberglass trays.
 - Carefully cut along the marked 22.5-degree lines.
 - Deburr and smooth all edges to prevent cable damage and ensure safety .

Assembly:

- Align the two cut sections so that the angled edges meet, forming a 45-degree bend.
- For trays with flanged edges, you may need to file or remove a portion of the lip to allow the sections to overlap and fit snugly .
- Secure the joint using bolts, rivets, or the manufacturer's recommended fasteners.

4. Safety Precautions:

- Always wear safety glasses, gloves, and ear protection during cutting and assembly.
- Ensure the tray is supported properly to prevent movement while cutting....
