

720-core fully equipped fiber optic distribution frame

Article Overview

A 720-core Fiber Optic Distribution Frame (ODF) is a high-density, rack-mounted system designed for fiber termination, distribution, splicing, and patching in telecommunications and data center networks.

Overview

A 720-core ODF is a high-capacity fiber management solution suitable for optical access networks, FTTx, FTTH, and indoor data centers. It provides efficient fiber organization, protection, and connectivity while supporting both ribbon and non-ribbon fibers. These frames are typically compatible with 19-inch rack standards and can be installed as wall-mounted or back-mounted units, allowing flexible deployment in large-scale network environments .

Key Features

- **High Density & Capacity:** Supports up to 720 fiber cores, often divided into modular units (e.g., 72-core ODF units) for easier management .
- **Fiber Protection:** Fully enclosed or open-type designs protect fibers from dust, mechanical damage, and environmental hazards .
- **Material & Build:** Constructed from cold-rolled steel with electrostatic spraying for durability and aesthetic finish .
- **Splicing & Patching:** Integrated splice trays allow fiber fusion splicing, while adapters (SC, FC, ST) facilitate patching and expansion
