

ASEAN Israel Electricity

Article Overview

ASEAN is advancing a regional power grid to enhance cross-border electricity trade, while Israel is developing interconnections to Europe to improve energy security and integrate renewables.

ASEAN Electricity and the ASEAN Power Grid (APG)

ASEAN has long pursued a regional power grid to ensure reliable, affordable, and sustainable electricity across its member states. The ASEAN Power Grid (APG) aims to promote multilateral power trade, enhance energy security, and support economic growth by connecting national grids and enabling cross-border electricity flows . Rapid urbanization, industrialization, and rising electricity demand—driven by electric vehicles, data centers, and air-conditioning—make regional connectivity increasingly critical . Key initiatives include:

- Lao-Thailand-Malaysia-Singapore Power Integration Project (LTMS-PIP), which facilitates renewable energy trade.
- Malaysia's ENEGEM digital renewable-energy trading platform, enabling efficient electricity transactions.
- Monsoon wind power exports from Laos to Vietnam, demonstrating practical renewable energy integration . ASEAN's strategy emphasizes harmonized grid codes, standardized wheeling and settlement charges, and long-term policy stability to make cross-border projects bankable and replicable . By 2035, Singapore aims to import up to 6 GW of low-carbon electricity from neighbors, reflecting the region's commitment to decarbonization and energy integration . The 8th ASEAN Energy Outlook projects that ASEAN will continue to increase electricity consumption, with...
