

All butterfly-shaped optical cables

Article Overview

Butterfly-shaped optical cables are flat, wing-like fiber optic cables designed for indoor and outdoor use, offering flexibility, durability, and low signal loss.

Design and Structure

Butterfly-shaped optical cables feature a flat, wing-shaped cross-section with the optical fiber at the center and two parallel strength members on either side, typically made of Fiber Reinforced Plastic (FRP) for non-metallic, EMI-resistant performance . Some outdoor variants include a steel wire messenger for aerial self-supporting runs . The flat design allows bending in the natural plane with minimal stress, while edge-on bending requires more force, reducing accidental kinks . Most butterfly cables use bend-insensitive single-mode fibers compliant with ITU-T G.657 standards, such as G.657.A1 or A2 .

Types of Butterfly Cables

- Indoor Butterfly Cables (GJXH):
 - FRP strength members only
 - LSZH (Low Smoke Zero Halogen) sheath
 - Fiber counts: 1-12 cores
 - Lightweight, flexible, ideal for building entry points and risers
- Outdoor Self-Supporting Butterfly Cables (GJYXFCH/GJXFH):
 - FRP plus steel messenger wire
 - Can span up to 50 meters without external support
 - LSZH or PE outer sheath for UV and moisture protection...
