

Anti-tracking network patch panels for subways

Article Overview

Anti-trespass panels are physical deterrent systems designed to prevent unauthorized access to subway tracks and rail infrastructure, significantly reducing trespassing incidents.

Overview

Anti-trespass panels (ATPs) are specialized safety installations used to restrict pedestrian access to subway tracks, platforms, and other high-risk areas. They are designed to be difficult to walk on, discouraging people from entering restricted zones and reducing accidents, injuries, and fatalities . Modern panels are typically made from recycled rubber or timber and feature raised pyramidal or conical projections, sometimes referred to as "witches' hats," which make standing or walking on them unstable .

Design and Materials

- **Materials:** Recycled rubber, timber, or plastic composites, chosen for durability and weather resistance .
- **Surface Profile:** Skewed planks, pyramids, or cones, ranging from 150 mm to 300 mm in height, depending on the manufacturer .
- **Environmental Considerations:** Many panels are made from 100% recycled materials and are UV-resistant, rot-proof, and maintenance-free
