

Bhutanese Standard Requirements for Distribution Box Sizes

Article Overview

Distribution boxes in Bhutan are generally required to meet specifications for material, protection, and configuration, including IP-55 protection, reinforced GI sheet construction, and proper bus bar and earthing arrangements.

Material and Construction

- Distribution boxes should be fabricated from 2 mm galvanized iron (GI) sheet steel for durability and outdoor suitability .
- The body must have sufficient reinforcement with channels to support the structure and allow secure fixing of components .
- The roof should be slightly slanting with a 50 mm overhang at the front and back to prevent water ingress .

Protection and Security

- Boxes must conform to IP-55 degree of protection, ensuring resistance to dust and water jets .
- Locking arrangements should use a Godrej-type 3-position locking system, with additional galvanized manual locks to prevent rusting .
- Door hinges should be concealed from the outside for security and aesthetic purposes .
