

Broadcast Fiber Optic Distribution Box Tail Fiber

Article Overview

A broadcast fiber optic distribution box organizes, protects, and distributes optical fibers, while tail fibers extend the reach of cables to endpoints for connectivity.

Fiber Optic Distribution Box Overview

A fiber optic distribution box (FDB), also known as an optical distribution box or termination box, is a compact device used to manage fiber optic cables in a network. It serves as a central point for termination, splicing, and distribution of fibers, providing protection and organization for delicate optical cables. These boxes are widely used in FTTx networks, including FTTH, and can accommodate connections to passive optical splitters, routers, switches, or customer premises equipment (CPE).

Key Features

- **Material and Durability:** Made from weather-resistant plastic or metal to withstand outdoor conditions, moisture, dust, and temperature variations.
- **Internal Components:** Includes a supporting frame, fiber discs, fixing devices, and splice protection elements to secure fibers and prevent damage.
- **Fiber Storage:** Provides space for slack fiber storage and proper insulation between metal components and the box shell.
- **Accessibility:** Designed for easy access to facilitate installation, maintenance, and splicing, saving time and cost.
- **Types:** Wall-mounted boxes for indoor or limited-space applications, and rack-mo...
