

Burundi Flame-Retardant Fiberglass Cable Tray Dimensions

Article Overview

Burundi flame-retardant fiberglass (FRP) cable trays are available in ladder and channel types, with standard widths ranging from 50 mm to 600 mm and rung spacing typically 150–300 mm, though exact dimensions should be confirmed with the manufacturer.

Types and Structure

Ladder Type: Features two longitudinal side rails connected by rungs at regular intervals, providing excellent ventilation and heat dissipation for power cables. Rung spacing is commonly 150 mm, 200 mm, or 300 mm, and side rail heights typically range from 50 mm to 150 mm depending on load requirements . **Channel (Solid or Perforated) Type:** Has a continuous bottom surface with side walls, either solid or perforated, offering full protection for delicate instrumentation or control cables. Side wall heights are usually 50–100 mm, and widths range from 50 mm to 600 mm . Covers may be flat or peaked to prevent dust, water ingress, or snow accumulation .

Material and Flame-Retardant Properties

Burundi FRP cable trays are made from pultruded fiberglass reinforced polyester or vinylester resin, ensuring lightweight, high strength, corrosion resistance, and flame retardancy. They meet ASTM D-635 and ASTM E-84 Class 1 flame rating standards, providing self-extinguishing properties . UV inhibitors are added to prevent degradation from sunlight exposure
