

CE Certification for Anti-Static Certification of Corrugated Sheathing for Optical Cables

Article Overview

CE certification for optical cable sheathing, including anti-static corrugated types, requires compliance with EU safety, fire, and environmental standards, typically under the Construction Products Regulation (CPR) and relevant harmonized EN standards.

CE Marking Requirements

CE marking indicates that a product meets EU safety, health, and environmental requirements and can be freely marketed within the EU . For optical cables, CE marking is mandatory if the product falls under harmonized EU directives, such as the Construction Products Regulation (CPR 305/2011/EU) for building-installed cables . The manufacturer is responsible for ensuring compliance and affixing the CE mark, which may appear on packaging or accompanying documentation if the cable itself is too small .

Applicable Standards for Optical Cables

- Construction Products Regulation (CPR)
- All cables permanently installed in buildings must comply with CPR and harmonized standard EN 50575 .
- Fire performance is classified from Aca (highest) to Fca (lowest), based on tests for heat release, smoke density, and acidity....
