

Cable tray spacing issue

Overview

Support spacing for cable trays must align with the manufacturer's instructions, as outlined in NEC 392. Generally, standard trays require supports every 6 to 10 feet, while heavy-duty, long-span trays can handle distances of up to 20 feet between supports. The safety of your people and the reliability of your electrical system depend on proper cable tray support spacing. It is really important in: Despite these benefits, cable management is sometimes disregarded during design or installation stages, which results in many issues that could have been readily prevented with suitable. Cable tray spacing is a critical aspect of electrical infrastructure, influencing both safety and efficiency.
