

Cable tray support rendering

Article Overview

You can render cable tray supports using 3D CAD models or BIM objects available from platforms like GrabCAD, Sketchfab, CGTrader, and BIMObject.

3D CAD Models

Platforms like GrabCAD offer a wide range of cable tray support models uploaded by community members. These models are available in formats compatible with CAD software and can be used for rendering or engineering visualization. You can search for specific types of supports, such as ceiling-mounted or floor-mounted, and download the files for integration into your project.

Modular Cable Tray Systems

Sketchfab provides modular cable tray systems suitable for industrial visualization, simulators, and games. These models include .blend and .fbx formats, with textures for new and used trays, and are designed to snap to a 10 cm grid for precise placement. They are ideal for rendering in Blender, Unreal Engine, or other 3D visualization tools.

Ceiling and Floor Support Models

CGTrader offers detailed 3D models of cable trays with ceiling supports and floor pedestals. These models include junction components (T-junctions, L-junctions, cross-junctions) and example cable routes. Material settings define surface appearance, making them suitable for digital rendering, animation, or AR/VR projects
