

Cable trays in 2020

Article Overview

Cable trays in 2020 include ladder, perforated, solid, basket, and channel types, designed for efficient cable management in industrial, commercial, and data center applications.

Types of Cable Trays

- Ladder Trays: Feature two side rails connected by cross members, allowing maximum airflow and easy cable access. Ideal for heavy-duty power and control cables, they prevent moisture buildup and promote heat dissipation .
- Perforated Trays: Similar to ladder trays but with perforated bottoms, providing additional support for smaller cables while maintaining ventilation .
- Solid Bottom Trays: Offer complete protection for cables, suitable for sensitive instrumentation or environments with minimal heat generation .
- Basket Trays: Made of welded wire mesh, these trays are lightweight, flexible, and ideal for routing fiber optic or low-voltage cables .
- Channel Trays: Compact and often used for short cable runs or aesthetic applications, available with solid or ventilated bottoms .

Materials and Finishes

Cable trays are manufactured from aluminum, galvanized steel, stainless steel, and FRP (fiber-reinforced plastic). Aluminum offers corrosion resistance and lightweight properties, while stainless steel provides high durability in harsh environments. FRP trays are resistant to chemicals and moisture, making them suitable for industrial applications
