

Calibration of Deli AE100A Optical Power Meter

Overview

Calibrating the unit requires a stable optical source, adjustable optical attenuator, and standard optical power meter. Press the button to adjust the calibration index from +5. If the charge becomes too low, the unit will automatically shut down. Page 7 2 Introductions Appearance Display LCD Display. Page 8 ----- Auto Detection Press the TWIN key to automatically detect the. EXFO can help save both time and costs with an automated calibration test system that is designed for the verification of power meters, attenuators, sources and optical time-domain reflectometers (OTDRs). You can also ask for a linearity. An optical power meter is the most common type of test equipment used to support fiber optic system. These miniature units fit in even the smallest of test locations, enabling users to run optical loss tests, which is a basic test required for all turn-up and. Thorlabs' expanding line of optical power and energy meters includes a large selection of sensor heads, single- and dual-channel power and energy meter consoles, power and energy meter interfaces, a wireless power meter with a built-in photodiode sensor, and a fiber optic power meter designed for.
