

Cambodia System Distribution Box

Article Overview

System distribution boxes in Cambodia include Branch Provider (BP) Boxes, prefabricated substations, and commercial distribution boards designed for safe and efficient electrical power management.

Types of Distribution Boxes

1. Branch Provider (BP) Boxes BP Boxes are centralized units that distribute electrical power to multiple circuits, protecting them with fuses or circuit breakers. They are widely used in residential, commercial, and industrial applications. Key features include robust construction, safety compliance against overloads and short circuits, ease of installation, scalable design for future expansion, and reliable performance for uninterrupted operation of connected devices (EKG Cambodia) . 2. Prefabricated Substations (ZBW Type) These are complete sets of distribution equipment combining high-voltage switchgear, distribution transformers, low-voltage switchgear, energy metering devices, and power factor compensation devices in one or several boxes. They are suitable for urban high-rise buildings, residential communities, industrial enterprises, street lighting, hotels, airports, and shopping malls. Advantages include short installation cycles, safe and reliable operation, small floor area, and aesthetic integration with surroundings (Dongfeng) . 3. Commercial Distribution Boards Suppliers like Legrand Cambodia provide aluminium and copper distribution boxes with capacities ranging from 120 mm² to 300 mm² and current ratings up to 540 A, suitable for various commercial and industrial installations .
