

Cameroon Bridge Construction

Article Overview

Cameroon is actively investing in bridge construction and rehabilitation to improve connectivity, with major projects like the Dja River and Mboro River bridges underway and a national program to rebuild flood-damaged structures.

National Bridge Rehabilitation Efforts

Cameroon has allocated CFA16.5 billion (\$27 million) in 2025 to rebuild 194 bridges and culverts destroyed by floods in 2024, spanning a total of 2,148 linear meters. Key reconstruction sites include Sanaga-Maritime (Littoral region), Munam (Mbengwi, Northwest), and Yagoua (Far North), which are critical for linking local communities to regional centers. Out of 2,645 bridges and culverts nationwide, 1,659 are in good condition, while 488 are non-functional or structurally compromised, highlighting the need for urgent rehabilitation to ensure safety and trade continuity .

Dja River Bridge Project

The Dja River bridge in southern Cameroon is a major infrastructure project led by China Harbour Engineering Company Cameroun. As of June 2026, the primary supports are nearly complete, with all 20 foundational piles finished and execution studies at 60% completion. The project includes a 90-meter bridge and 3 kilometers of access roads, featuring a two-lane carriageway 7 meters wide with 1.5-meter shoulders, drainage culverts, and protective dykes along the riverbanks. The total investment is approximately 10.53 billion FCFA, and the bridge will enhance the Assok-Ngombo axis in the Dja-et-Lobo department, improving regional connectivity
