

Can a single-mode fiber optic cable transmit 100g

Overview

100G OS2 Single-Mode Fiber Cables are the highest performing fiber optic cables currently available, with further distances than multimode specifications. OS2 fiber can transport data at 100G for up to 10km using a 1310nm transceiver, or up to 40km using a 1550nm transceiver. The Cisco 100GBASE Quad Small Form-Factor Pluggable (QSFP) portfolio offers customers a wide variety of high-density and low-power 100 Gigabit Ethernet connectivity options for data center, high-performance computing networks, enterprise core and distribution layers, and service provider. The performance and usefulness of 100GB fiber optic cables in high-speed data communication are characterized by several critical features. This module is small and easy to swap. You can change it without turning off your network. The QSFP28-100G-ZR4 uses LAN-WDM technology.
