

Certified Carrier-Grade Router 800G

Article Overview

Certified carrier-grade 800G routers deliver ultra-high bandwidth, scalable port density, and advanced features for next-generation IP transport and data center networks.

Overview

800G routers are designed to meet the growing demands of high-capacity networks, including backbone, metro aggregation, and hyperscale data centers. They provide extremely high throughput, low latency, and flexible port configurations to support AI-driven traffic, cloud services, and 5G transport networks. These routers leverage QSFP-DD or similar high-density interfaces to enable 800GbE connectivity while maintaining backward compatibility with 400GE, 200GE, and 100GE optics, allowing operators to scale efficiently without replacing existing infrastructure .

Key Features

- **High Port Density and Scalability:** Routers like the UfiSpace S9620-32E support 32 x 800G ports with flexible breakout options, while Juniper's PTX and ACX series offer modular and fixed chassis solutions for cloud-scale port density .
- **Advanced Routing and Traffic Engineering:** Support for MPLS, SR-MPLS, SRv6, EVPN, and segment routing ensures reliable service delivery and efficient traffic management across complex topologies .
- **Energy and Space Efficiency:** 800G routers double interface capacity in the same rack footprint, reducing energy consumption and simplifying network management .
- **High Reliability and Redundancy:** Carrier-grade designs include redundant control...
