

Classification Standards for Optical Port Module Applications

Overview

From SFP and QSFP to today's QSFP-DD and OSFP form factors, MSA specifications define how optical modules are mechanically, electrically, and logically designed—ensuring that products from different vendors can work together reliably. MSA (Multi-Source Agreement) standards define the mechanical, electrical, and management interfaces of optical transceivers, enabling multi-vendor interoperability, supply chain flexibility, and large-scale network deployment. Currently, SFP modules also have the preceding functions. The Transmitter Optical Sub Assembly (TOSA) is responsible for the emission of light. They are widely used in data centers, telecommunications networks, and industrial communication systems.
