

Color of 24-core optical fiber cable tube

Overview

Tubes with 24 uniquely colored fibers: Fibers 1 to 12 use the standard blue through aqua color sequence. Understanding fiber-optic color codes is essential for any technician tasked with installing, maintaining, or troubleshooting modern fiber networks. By adopting the TIA/EIA-598C standard, you gain a universal “language” of colors that speeds identification, reduces miswiring, and enhances safety. This Applications Note addresses Corning Optical Communications' identification scheme for optical fiber cables. This identification scheme follows the TIA/EIA-598, “Optical Fiber Cable Color Coding. ” This standard is adopted by; Telcordia GR-20 – Generic Requirements for Optical Fiber and Optical. This sequence is used by UMH1A1J-24, MDS1JKT-24, and the LongSpan ADSS designs when 24 fibers per tube are specified. Each fiber uses a certain slot as well as a predetermined set of colors.
