

Composition of Swiss Environmentally Friendly Distribution Box

Article Overview

Swiss environmentally friendly distribution boxes are primarily made from durable, reusable plastics and polyurethane membranes, designed for sustainability, protection, and reusability.

Dispobox

The Dispobox is made of impact-resistant plastic, providing robust protection for goods during transport while supporting multiple reuse cycles . These boxes are integrated into a return-and-reuse system, where empty boxes are collected, cleaned, and prepared for the next shipment, reducing waste and carbon footprint . Swiss Post offsets CO₂ emissions from deliveries and uses electric vehicles, further enhancing the environmental sustainability of Dispobox logistics .

Membrane Boxes

Membrane boxes consist of two polystyrol half-boxes fitted with a thin polyurethane membrane . The polyurethane film is highly elastic and chemically inert, allowing it to deform around items and hold them securely without additional packaging materials . Hinges and closing hooks enable repeated use, and the boxes are designed for delicate, irregularly shaped, or sensitive items, making them ideal for industries like watchmaking, electronics, and medical devices . The transparency of the boxes allows visual inspection without opening, further reducing unnecessary handling and waste
