

# Configuration of Temporary Lighting Distribution Box in Czech Republic

## Article Overview

A temporary lighting distribution box in the Czech Republic should be configured with proper IP-rated enclosures, circuit protection, grounding, and modular connectors to ensure safety, mobility, and compliance with European standards.

### Key Components

- Enclosure and Protection
  - Use an IP-rated outdoor enclosure (IP54-IP69 depending on exposure) to protect against dust, water, and impact .
  - Material should be UV-resistant, corrosion-resistant, and robust for outdoor or industrial use .
- Incoming Supply and Main Switch
  - Include a main isolator or switch to disconnect the entire box for maintenance or emergency .
  - Ensure compatibility with single-phase or three-phase AC supply, depending on site requirements .
- Circuit Protection
  - Install MCBs (Miniature Circuit Breakers), RCCBs/RCDs (Residual Current Devices), or RCBOs for each outgoing circuit to protect against overloads and earth faults .
  - For hazardous or wet locations, use GFCI-protected circuits to prevent electrocution .
