

Connect the socket inside the three-level distribution box

Article Overview

To connect a socket inside a three-level distribution box, you must safely connect the phase, neutral, and earth wires through the appropriate protective devices, ensuring balanced load distribution across all three phases.

Step 1: Safety First

Before starting, turn off the main power supply and verify that the DB is de-energized. Use insulated tools and wear protective gloves to prevent electric shock.

Step 2: Identify the Distribution Levels

In a three-level DB setup:

- Main Distribution Board (MDB): Receives power from the utility and contains the main MCCB or isolator.
- Sub Distribution Board (SDB): Fed from the MDB to supply specific floors or areas.
- Final Distribution Board (FDB): Provides power to individual sockets, lighting, or machinery ().

Step 3: Locate the Protective Devices

- MCCB: Main switch for high current protection.
- MCBs: Protect individual circuits, including the socket circuit....
