

Cost of manufacturing cable and optical fiber reel rack

Article Overview

The cost of manufacturing cable and optical fiber reel racks typically ranges from a few hundred to several thousand dollars per unit, depending on materials, size, and modularity.

Factors Affecting Cost

Material Type: Traditional racks are often made of steel or aluminum, while advanced systems like OCC's MARS® use impact-modified polymers, which reduce weight and improve portability but may increase material costs . **Design and Modularity:** Modular racks with adjustable frames, stackable features, and integrated cable handling systems (e.g., A-frames, cradles, or tripods) are more expensive than simple fixed racks. Modular systems allow flexibility for different reel sizes and deployment scenarios . **Size and Capacity:** Larger racks that hold multiple reels or heavy-duty armored cables require stronger materials and reinforced structures, increasing fabrication costs. **Manufacturing Process:** Costs include raw materials, fabrication (cutting, welding, molding), surface treatment (powder coating or corrosion protection), and assembly. Automated or precision manufacturing for high-quality polymer racks can further increase costs . **Additional Features:** Optional accessories such as flip-out handles, built-in dividers, connector cradles, or integrated cleaning kits add to the total cost .
