

Dimensions and Specifications of the Power Distribution Box in the Exhibition Hall

Article Overview

Exhibition hall power distribution boxes are robust, modular units designed for high-power booth applications, featuring IP66 protection, 125A industrial sockets, and separate strong/weak current compartments.

Structural Design and Materials

The boxes typically have a bearing frame made of cold-formed rectangular welded steel pipe, providing high mechanical strength and stability. The casing cover is constructed from 10 mm thick stainless steel 304 or high-quality tread plate, with surface treatments such as wire drawing or high-strength wear-resistant paint to withstand mechanical pressure from wheels and equipment . The enclosure is designed to separate strong and weak current wiring, reducing electromagnetic interference and allowing independent maintenance of weak current boxes .

Electrical Specifications

- Sockets: Equipped with 125A high-power industrial connector sockets, installed on both sides of the box and inclined for easier plug-in and pull-out .
- Protection: Circuit breakers, residual current devices (RCDs), and surge protectors are installed in separate compartments to prevent dust, moisture, and water ingress, achieving IP66 protection
