

# Distance between cable tray fixed legs

## Overview

When installing two cable trays in parallel at the same height, the distance between them should be no less than 0. This spacing is crucial for adequate maintenance access, ease of inspection, and ensuring proper airflow for effective heat dissipation. The spacing between trays, whether horizontal or vertical, depends on various factors like cable type, environment, and tray material. Proper installation can significantly reduce electromagnetic interference, prevent fire hazards, and improve overall efficiency. The National Electrical Code is a set of principles designed to promote public safety and welfare, as well as safeguard public health by regulating the design and operation of electrical facilities and. We have more than a decade's worth of experience making and designing quality cable tray and cable management systems. Our knowledgeable production team works closely with each customer to provide quality solutions based on your schedule and budget. We want each and every experience with our. As per the National Electrical Code, a cable tray system is “a unit or assembly of units or sections and associated fittings forming a rigid structural system used to securely fasten or support cables and raceways. ” What does this mean?

Cable trays support cable the way that roadway bridges. us-trations without notice.
