

Distribution Box Covering Wall Panel

Article Overview

A distribution box can be safely covered using hinged panels, decorative doors, or custom enclosures while maintaining full accessibility and compliance with electrical codes.

Key Considerations

Accessibility and Safety: The distribution box must remain fully accessible at all times. The National Electrical Code (NEC) requires a minimum working clearance of 30 inches wide and 36 inches deep in front of the panel, with a vertical clearance of at least 6.5 feet. Any cover must allow immediate access to breakers without tools and should not obstruct ventilation or be made of combustible materials . **Materials and Design:** Common solutions include:

- **Hinged Artwork or Frames:** Mount a canvas or framed print on sturdy hinges so it can swing open to access the panel. Magnetic catches or simple latches can keep it closed .
- **Decorative Doors or Cabinet Panels:** Custom doors or shallow cabinets can conceal the panel while blending with room decor. Ensure the door opens fully without tools.
- **Sliding Panels or Mirrors:** Sliding panels can hide the panel while allowing quick access. Mirrors or decorative panels can enhance aesthetics in hallways or living rooms .
- **Industrial or Outdoor Distribution Boxes:** For larger or industrial-grade distribution panels, consider modular enclosures with locking systems, IP-rated sealing, and integrated monitoring. These can be customized to protect the panel from dust, moisture, or accidental contact while maintaining functionality
