

Does a trunk optical cable need a ground plane

Overview

First of all, we do not ground fiber optic cables. This Applications Engineering Note (AE Note) discusses conventional bonding and grounding practices for conductive fiber optic cable and hardware installations within the scope of the National Electrical Code (NEC). These cables include metallic components that can carry electrical currents, presenting potential hazards such as electrical shock or fire. Since an optical fiber cable is non-conductive and there is no electric flowing, there are several advantages over a twisted copper cable in deploying: The non-conductive (dielectric) characteristics of fiber impacts how a designer lays out cabling pathways. It acts as the “backbone” or main line of communication within a network, connecting different areas together while preserving signal quality over long distances. The. Is there any NEC / NESC or other requirement to ground/bond the tracer wire on communication wire on one end (Fiber in this case)?

There is a 138kV transmission line near a large solar farm and a 7.
