

Does the XGN high-voltage switchgear have a small busbar

Overview

XGN7-12 box fixed type metal-enclosed switchgear (switch cabinet for short) is used to receive and distribute electrical energy in 3. 6-12KV three-phase AC 50Hz single-bus, single-bus with bypass and double-bus systems as the acceptance and distribution of power, mainly used in power plants, small and medium-sized generators to send power, industrial, mining and. Among the current high-voltage switchgear, the XGN68-12 high-voltage cabinet series is a small-sized, highly insulated, and more environmentally friendly high-voltage switchgear. A complete set of equipment suitable for 3-10kv three-phase AC 50Hz single busbar and busbar segmentation. It belongs to the new generation of compact urban and rural power grid equipment, featuring compact size, reasonable structure, safety.
