

Does the three-level distribution box have two doors

Overview

Part of a three-tier protection system, ensuring power safety at intermediary stages. Equipped with double doors for added protection, coated surfaces for durability, and a rainproof design for outdoor environments. The secondary box adopts an inner and outer door design, with a spray painted exterior. Connects to end-use equipment via switch boxes, forming a three-tier power. A switchboard is a large single panel, frame, or assembly of panels on which are mounted (on the face, back, or both) switches, overcurrent and other protective devices, buses, and usually instruments. Panelboards supplied by a 4-wire, delta-connected, three-phase (high-leg) system must have. The primary distribution box refers to the main distribution box, typically located in the distribution room. Safe and beautiful, rain proof box top suitable for field work.
