

East Africa Electrical Cable Tray Specifications

Article Overview

Electrical cable trays in East Africa are typically manufactured from steel or fiberglass, comply with NEMA and EN standards, and are designed for durability, corrosion resistance, and safe cable management.

Types of Cable Trays

- Ladder Cable Trays – Ideal for heavy-duty cables and long spans; allow air circulation to prevent overheating.
- Perforated Cable Trays – Provide ventilation and drainage; suitable for medium loads.
- Solid Bottom Trays – Used where protection from dust, moisture, or small rodents is required.
- Wire Mesh Trays – Lightweight, flexible, and easy to install for smaller cable runs.

Materials and Coatings

- Steel (Hot-Dip Galvanized or Powder-Coated) – Provides high mechanical strength and corrosion resistance; hot-dip galvanization ensures protection even at cut edges (EN 10327) .
- Fiberglass Reinforced Plastic (FRP) – Offers chemical resistance, low flammability, and reduced weight; working load capacity is calculated with a safety factor of 1.5 .
- Stainless Steel – Used in highly corrosive or marine environments.
