

Eb 10 Gigabit optical modules are backward compatible

Overview

This means that equipment designed with QSFP-DD connectors will be backward compatible, allowing them to support existing QSFP and QSFP28 modules and provide great flexibility for end users. 10GbE SFP+ optical transceivers include short-reach (SR), long-reach (LR) and extended. In summary, 10G copper port modules and 10G optical port modules differ in flexibility, backward compatibility, distance, application latency and cost. You can choose the right product. The Cisco ® 10GBASE SFP+ modules (Figure 1) give you a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider. But the reverse is often true: many SFP+ ports will accept 1Gb/s SFP modules and fall back to 1G operation. Real-world behavior depends on the device vendor, the port's electrical design and firmware, and the exact transceiver type. 4ft (30m) * using Cat6a/Cat7 or above cable for 10G connection in various applications. The upkeep and operation of the network infrastructure are directly related. Future data center deployment will benefit tremendously from the flexibility of transceivers with backward compatibility.
