

Exhibition Distribution Box Size 11 slots

Article Overview

An 11-slot exhibition distribution box typically features a modular aluminum or steel enclosure designed for secure, organized electrical or display connections.

Construction and Materials

Exhibition distribution boxes are often made from extruded aluminum or cold-formed welded steel, providing a strong, lightweight, and corrosion-resistant frame. The cover plates may use stainless steel 304 or high-quality patterned steel, sometimes treated with wire drawing or high-strength wear-resistant paint to withstand mechanical stress from wheels or equipment during exhibitions . End panels and top plates are usually removable for easy access, and screws are recessed to maintain a flat surface .

Slot Configuration

An 11-slot configuration allows for multiple modules or circuit connections, often compatible with Size 3 prototype PCBs (160x100mm) or standard Eurocard boards . Slots can be used for strong and weak current separation, ensuring that high-power and low-power circuits do not interfere with each other . This separation is particularly important for exhibition setups with sensitive electronics.

Electrical and Safety Features

- High-power industrial connectors (e.g., 125A) support demonstration equipment with significant power requirements
