

Explosion-proof distribution box three-level power distribution system

Article Overview

An explosion-proof distribution box with three-level power distribution safely delivers power in hazardous environments, featuring modular design, multi-circuit chambers, and compliance with ATEX, IECEx, and GB/T3836 standards.

Key Features

Safety and Certification: Explosion-proof distribution boxes are designed to contain internal sparks or explosions and prevent ignition of surrounding flammable gases or dust. Look for certifications such as ATEX, IECEx, and NEMA, which validate suitability for hazardous zones, including Zone 1/2 gas (IIA-IIC) and Zone 21/22 dust environments . Compliance with standards like GB/T3836 and IEC/EN60079 ensures legal and operational safety .

Three-Level Power Distribution: These boxes often feature multi-circuit chambers within a single enclosure, allowing hierarchical power distribution: main input, branch circuits, and sub-branch or control circuits. This design supports high-capacity power distribution (up to 630A main and 400A branch circuits) while maintaining explosion-proof integrity .

Materials and Construction: Robust materials such as stainless steel, carbon steel, aluminum alloys, or fiberglass-reinforced polyester provide mechanical strength, corrosion resistance, and durability in harsh environments . Enclosures are typically IP54 to IP66 rated, ensuring protection against dust and water ingress .

Modular and User-Friendly Design: Many models, such as the CZ1290 and SEM(D) series, offer modular construction, pre-wired internal circuits, operating handles, and windowed panels for easy operation and maintenance. This reduces installation complexity and allows customization for spe...
