

Explosion-proof industrial-grade distribution boxes

Article Overview

Explosion-proof boxes and distribution boxes are specially designed enclosures that safely contain electrical components in hazardous environments, preventing ignition of flammable gases, vapors, or dust.

Overview

Explosion-proof boxes, also known as Ex enclosures, are engineered to contain internal explosions and prevent the propagation of flames to the surrounding atmosphere. They are widely used in industries such as oil and gas, chemical processing, power generation, offshore platforms, mining, and pharmaceutical production where explosive atmospheres may exist . These enclosures are critical for protecting personnel, equipment, and operations in hazardous areas.

Types of Explosion-Proof Boxes

- **Junction Boxes:** Used to safely house electrical connections and wiring in hazardous zones. They are available in stainless steel (AISI 304L, 316L), aluminium, and GRP polyester, and can be customized for size and configuration .
- **Distribution Boxes:** Designed to distribute electrical power safely in hazardous areas. They often include motor starters, switches, grounding devices, and control units, and are built to withstand extreme temperatures and outdoor conditions .
- **Control Stations:** Local control panels or push-button stations that allow safe operation of machinery in explosive atmospheres. These can be made from stainless steel or GRP and are fully configurable with ATEX and IECEx certified components
