

FCPC Fiber Optic Interface

Article Overview

The FC/PC fiber optic interface is a threaded connector with a physical contact polish, designed for low-loss, high-stability connections in single-mode and polarization-maintaining fibers.

Overview

The FC/PC connector is a type of fiber optic connector featuring a threaded body that ensures a secure connection, particularly in high-vibration environments . "FC" stands for Ferrule Connector or Fiber Channel, and "PC" stands for Physical Contact, indicating that the fiber cores touch directly when mated, minimizing air gaps and reducing back-reflection . The fiber end is typically embedded in a 2.5 mm ceramic or stainless steel ferrule, which is spring-loaded to control mating force .

Key Features

- **Threaded Design:** Provides a secure, vibration-resistant connection suitable for precision applications .
- **Physical Contact (PC) Polish:** The slightly curved end face reduces insertion loss and back-reflection, typically achieving return loss around 40 dB .
- **Single-Mode and Polarization-Maintaining Compatibility:** FC/PC connectors are widely used with single-mode fibers and PM fibers, with adjustable keys for precise alignment in PM applications .
- **Alignment Key:** Prevents fiber rotation during mating, ensuring consistent optical performance .
- **Ferrule Material:** Ceramic ferrules are common, providing durability and low insert...
