

Features of Highway Cable Trays

Article Overview

Highway cable trays come in several types, including ladder, perforated, solid bottom, wire mesh, channel, trough, and single rail, each designed for specific load, ventilation, and environmental requirements.

Ladder Cable Tray

The ladder type features two side rails connected by rungs, allowing excellent airflow around cables. It is ideal for heavy power cables and long spans, making it suitable for power plants, substations, and outdoor highway installations. Its open design ensures superior heat dissipation and easy maintenance, supporting high load capacities over long distances.

Perforated Cable Tray

Perforated trays have a solid bottom with evenly spaced holes, providing moderate ventilation while supporting cables. They are commonly used in control rooms, commercial buildings, and instrumentation wiring. This type offers a neat appearance and good cable support for indoor environments.

Solid Bottom Cable Tray

Solid bottom trays fully enclose cables, protecting them from dust, moisture, and electromagnetic interference. They are often used in data centers, hospitals, and sensitive control systems. Optional covers enhance protection, making them suitable for environments where cable integrity is critical....
