

Fiber Optic Cable-22

Article Overview

A 22 fiber optic cable typically refers to a cable containing 22 optical fibers, designed for high-speed data transmission in indoor, outdoor, or specialized environments.

Overview

A 22 fiber optic cable contains 22 individual optical fibers that transmit data as pulses of light, offering high bandwidth, low signal loss, and immunity to electromagnetic interference compared to copper cables. These cables can be single-mode for long-distance communication or multimode for shorter distances, depending on the application. They are widely used in telecommunications, data centers, FTTP/FTTH networks, and industrial or naval applications.

Types and Construction

- **Outdoor Loose Tube Gel-Free Cables:** For example, Corning ALTOS® 22-fiber cables use a binderless loose tube design with SMF-28® Ultra fiber, water-swallowable materials for full waterblocking, and a rugged polyethylene jacket. These are suitable for aerial, duct, or limited indoor installations and allow easy midspan access without damaging fibers.
- **Shipboard LSZH Cables:** The M85045/22 is a low smoke, zero halogen (LSZH) cable designed for naval or shipboard environments, providing durability and safety in confined spaces.
- **Patch Cables:** Factory-terminated LC-LC 22-fiber patch cables are used for connecting equipment in data centers or network racks, tested to meet industry performance standards and often come with a lifetime warranty
