

Fiber Optic Cable 8-Core Splicing Reel Wiring Sequence

Article Overview

The standard 8-core fiber optic cable splicing sequence follows the TIA/EIA color code: Blue, Orange, Green, Brown, Slate, White, Red, Black.

Standard 8-Core Fiber Color Sequence

For an 8-core fiber optic cable, the typical color coding used for splicing and termination is:

- Blue
 - Orange
 - Green
 - Brown
 - Slate (Gray)
 - White
 - Red
 - Black
- This sequence ensures consistent identification across splices, terminations, and patch panels, reducing the risk of miswiring and signal loss.

Splicing Best Practices

- Preparation: Strip the outer jacket and buffer tubes carefully, clean fibers with IPA, and avoid touching the glass surface to prevent contamination .
- Cleaving: Use a precision fiber cleaver to cut fibers at a 90° angle for optimal fusion
