

Fiber Optic Cable Binding Straps

Article Overview

Fiber optic cable straps are specialized tools designed to bundle, secure, and organize fiber optic cables safely, often using reusable Velcro wraps, adhesive clips, or P-clips to prevent damage and maintain signal integrity.

Types of Fiber Optic Cable Straps

1. Reusable Velcro Straps Velcro-based straps, such as SPEEDWRAP® FiberTIE Straight Strips, provide a gentle, reusable solution for bundling fiber and data cables without causing damage to delicate fibers. They are ideal for temporary or adjustable cable management and can be used repeatedly without compromising the cable jacket .
2. Self-Adhesive Cable Clips Products like Thorlabs' PFS01 and PFS02 feature a self-adhesive base and flexible nylon construction, making them suitable for securing small-diameter fiber optic patch cables to work surfaces. These clips are easy to install and remove, providing a tidy and safe cable routing solution .
3. P-Clips and Loop Clamps P-Clips can secure cable bundles with diameters up to 19 mm and are affixed using screws, making them suitable for permanent installations on optical tables or workstations. Loop clamps are used for cylindrical components and can also secure fiber cables while minimizing mechanical stress .
4. Custom Fabricated Straps Suppliers like Bardsco offer custom Velcro straps, hook-and-loop wraps, and reusable cable wraps that can accommodate fiber optic cables of various sizes. These straps are available in multiple colors and styles, allowing for organized and color-coded cable management .
