

Fiber Optic Cable Deployment Qualification

Overview

The Certified Network Cable Installer (CNCI ®) has become the industry preferred certification for fibre optic cable installation and is specified as a requirement on many job profiles and installation project contracts. IEC 60794 is the international standard series governing the design, construction, and performance verification of fibre optic cables. Published by the International Electrotechnical Commission, it defines the mechanical, environmental, and optical tests that every cable must pass before it can be. While qualification testing is fast and cost-effective, it does not provide the depth of information needed for high-speed or mission-critical networks, making it suitable for short-term validation rather than long-term assurance. As fiber optics becomes the backbone of modern. The Fiber Optic Association, Inc.
