

Fiber Optic Cable Power Fittings

Article Overview

Fiber optic cable fittings for power construction include joint boxes, clamps, suspension hardware, and vibration dampers designed for OPGW and ADSS cables to ensure secure, durable, and high-performance installations.

Key Types of Fittings

1. Joint Boxes and Termination Units Fiber optic joint boxes protect optical fibers from environmental factors such as water, humidity, and mechanical stress. High-quality enclosures, like RIBE® OPTOFIT® and Prysmian closures, offer IP67-rated protection, aluminum or corrosion-resistant housings, and variable inlet diameters to accommodate cable sizes from 9 mm to 28.6 mm . They are designed for easy installation, splicing, and long-term durability, with capacities ranging from tens to hundreds of fiber splices. 2. Clamps and Suspension Hardware Clamps are essential for securing cables to towers or poles. These include:

- Tension clamps for holding cables under mechanical load
- Suspension clamps for supporting cable weight without inducing strain
- Down lead clamps for vertical transitions from towers to ground or equipment
- Vibration clamps and plastic dampers to reduce oscillation and fatigue in high-wind or long-span installations . 3. Brackets and Support Structures Fiberglass brackets, such as PLP's FIBERLIGN® series, provide standoff distances and flexible end-fitting options for ADSS cables when pole space is limited. They allow for economical expansion of existing installations and secure mounting of multiple cable types .

Installation Considerations...
