

Fiber Optic Cable Products for Cabling Installation

Article Overview

Fiber optic cables are available in a wide range of types and designs for indoor, outdoor, and specialized installations, supporting high-speed, long-distance, and reliable data transmission.

Types of Fiber Optic Cables

Single-mode fiber (SMF) is designed for long-distance, high-performance communication, ideal for wide area networks (WANs), urban networks, and FTTx applications, transmitting signals with minimal attenuation over kilometers . Multimode fiber (MMF) is typically used for shorter distances, such as local area networks (LANs), supporting bandwidths up to 1 Gbit/s over distances up to 275 meters, suitable for indoor installations and older network infrastructures . Indoor cables are lightweight, flexible, and comply with fire protection standards (B2ca to Eca), facilitating installation within buildings . Outdoor cables are engineered to withstand environmental factors such as UV exposure, moisture, heat, and physical stress, making them suitable for underground, aerial, or duct installations . Universal fiber optic cables can transition seamlessly from outdoor to indoor use, ideal for campus networks connecting multiple buildings .

Cable Construction and Features

Fiber optic cables consist of a core that carries light signals, surrounded by cladding to maintain internal reflection, and protective coatings, strength members, and out...
