

Fiber Optic Cable Terminal Distribution Box

Article Overview

Fiber optic distribution boxes manage multiple fiber connections, while terminal boxes provide compact, secure endpoints for fiber termination and splicing.

Fiber Optic Distribution Box (FDB)

A Fiber Distribution Box is designed to organize, protect, and distribute fiber optic cables in both indoor and outdoor networks. These boxes are commonly used in FTTH, FTTB, and FTTD networks to connect multiple subscribers or buildings from a central distribution point . Key features include:

- Capacity: Available in 8, 12, 16, 24, 48, 144, and 288-core configurations to accommodate different network scales .
- Functionality: Supports fiber splicing, cross-connection, and integration of PLC splitters (e.g., 1×8, 1×16) for efficient signal distribution .
- Construction: Made from high-strength engineering plastics (ABS, ABS+PC), offering UV resistance, anti-aging, and flame-retardant properties .
- Installation: Can be wall-mounted, pole-mounted, or rack-mounted, with designs suitable for indoor or outdoor environments .
- Protection: Sealed with screw or buckle mechanisms, often tested for salt spray, crush, and temperature cycling to ensure durability in harsh conditions .
