

Fiber Optic Cold Joint Repair Fluid

Article Overview

Fiber optic cold joint repair fluids are specialized, residue-free solvents used to clean and prepare fiber ends for mechanical splicing or low-loss connections.

Purpose and Function

Cold joint repair fluids are designed to clean, remove contaminants, and improve optical contact between fiber ends without the need for heat. They are commonly used in mechanical splicing, where two fiber ends are aligned in a precision sleeve and an index-matching fluid is applied to reduce reflection and insertion loss. Proper cleaning ensures minimal signal loss, typically below 0.1 dB, and prevents long-term degradation of the joint.

Types of Fluids

- Alcohol-Based Solvents (IPA): Traditionally used for cleaning fiber end-faces and connectors. They are effective at dissolving dried contaminants and softening residues. However, they are flammable and may pose health risks with prolonged exposure.
- Enhanced Formula Cleaning Fluids: Modern alternatives, such as AFL FCC2 Enhanced Formula, are non-flammable, environmentally safe, and residue-free. These fluids outperform IPA-based cleaners, providing high purity and consistent cleaning for both connector end-faces and bare fiber before splicing. They are safe for transport and field use, making them ideal for technicians working in various environments.
