

Fiber Optic Connector FC Coupler

Article Overview

FC type fiber optic couplers use threaded ferrule connectors designed for high-precision, low-loss fiber alignment, commonly available in FC/PC and FC/APC variants.

Overview of FC Connectors

The FC (Ferrule Connector) type is a fiber-optic connector with a threaded body, originally designed for high-vibration environments and precise alignment of optical fibers. The fiber end is embedded in a 2.5 mm ferrule, typically made of zirconia ceramic or stainless steel, and polished to ensure physical contact (PC) between fiber cores, minimizing insertion loss and back-reflection. FC connectors are widely used in datacom, telecommunications, measurement equipment, and single-mode lasers.

Types of FC Connectors

- FC/PC (Physical Contact): The fiber tip is polished to a rounded surface, allowing direct core-to-core contact. This reduces insertion loss and is suitable for general single-mode applications.
- FC/APC (Angled Physical Contact): The fiber end is polished at an 8° angle, which prevents reflected light from traveling back up the fiber, achieving a typical return loss of 60 dB. FC/APC connectors are ideal for applications requiring minimal back-reflection, such as high-precision lasers and interferometry.

Coupler Compatibility

FC type couplers and collimators are typically designed to accept FC/PC or FC/APC connectors. They may feature wide key (2.14 mm) or narrow key (2.0 mm) alignment...
