

Fiber Optic Sensor Stripper Process

Overview

Fiber optical stripping can be done using a special stripping and preparation unit that uses hot sulfuric acid or a controlled flow of hot air to remove the coating. Optical fibers are typically protected with fiber coatings made from polymers such as acrylate, silicone or polyimide. Fiber strippers are precision tools that reliably and cleanly remove a defined length of coating. An Optical Fiber Stripper is arguably the most fundamental hand tool for any technician working with fiber optic networks. In an industry where precision is not just a goal but a requirement, the quality of your stripping tool directly impacts signal integrity, network reliability, and overall. High-Precision Removal of Buffer/Coating from Optical Fibers Safely remove the buffer from the fibers! sterilizable Fiber strippers for medical applications. The most secure way to strip optical fibers Thermal fiber strippers. 3SAE Technologies designs and manufactures a wide range of high performance fiber optic stripping tools for optical fiber coating removal, providing the most advanced line of high strength thermal mechanical strippers, non-contact high strength fiber optic strippers and the industry's only diameter. AFL's Precision Strip is a fast, simple solution for stripping fiber without damage.
